Abstract

Engineering students often need a clear, practical model for writing dissertations; this document provides an overview tailored to final-year mechatronics projects and demonstrates effective use of a LaTeX thesis template. Many student reports lack consistent structure, rigorous scoping, and appropriate use of figures, tables, code listings, and citations, which impedes readability and assessment.

This work contributes an exemplar that explains what each report section should contain, offers typical subheadings, and embeds working examples of template elements to copy and adapt. The document is implemented in XeLaTeX using the `memoir` class with chapters for Introduction, Literature Review, Methodology, Results, Discussion, Conclusions, Recommendations, and Appendices, along with acronyms and bibliography support; the result is a shareable guide that doubles as a starting point for students to produce professional, evidence-based engineering reports.

How to write an abstract in 5 minutes?

Answer the following questions in narrative form with no more than two sentences per question:

- *What is the background to the project?*
- *What is the problem that is being solved?*
- *What is the contribution of the project to this problem?*
- *What is the main conclusion of the project?*

Contents

List of Figures **iv**

List of Tables **v**

1 Introduction **1**
1.1 Background and Motivation 1
1.2 Literature Review 1
1.3 Aims, Objectives and Contributions 1
1.4 Project Scope and Limitations 1
1.5 Report Outline 1

2 Literature Review **2**
2.1 Introduction 2
2.2 Overview of Motion Capture 2
2.3 Survey of Optical Motion Capture 2
2.4 Applications of Optical Motion Capture 2
2.5 Sources of Error in OMC 2
2.6 Current Capabilities and Limitations of Existing Approaches 2
2.7 Summary 2

3 System Specifications **3**
3.1 Introduction 3
3.2 Purpose of the GA 3
3.2.1 Performance Requirements 3
3.3 Purpose of the OMC system 3
3.3.1 Performance Requirements 3

4 Optimal Camera Placement **4**
4.1 Literature Review 4
4.1.1 Reasons for Optimising Camera Placement 4
4.1.2 Optimisation Approaches for Sensor Placement 4
4.2 Genetic Algorithm Theory Development 4
4.2.1 Genetic Algorithm Terminology 4
4.2.2 Encoding Schemes 4
4.2.3 Selection Methods 4
4.2.4 Crossover Techniques 4
4.2.5 Choosing Parameter Values 4

4.3 Methodology 4
4.4 Results and Discussion 4

5 Optical Motion Capture 5
5.1 Literature Review 5
5.1.1 Estimation Algorithms 5
5.1.2 Hardware Considerations for Camera-Based Sensing 5
5.2 Camera Selection and System Integration 6
5.3 Theory Development 6
5.3.1 3D Geometry and Reference Frames 6
5.3.2 Computer Vision 6
5.3.3 Image Formation 6
5.3.4 Image Processing 6
5.3.5 Triangulation 6
5.3.6 Estimation Filtering 6
5.4 Algorithm Development 6
5.5 Implementation 6
5.5.1 Camera Calibration 6
5.5.2 Graphical User Interface 6
5.6 Experimental Testing Setup 6
5.7 Results and Discussion 6

6 Conclusion and Future Work 7
